DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-14, drawn to a method for serving an image from a server to a client, classified in class 358, subclass 403.
 - II. Claims 15-17, drawn to a method for serving a web page at a web server, classified in class 358, subclass 426.04.
 - III. Claims 18-23, drawn a computer program product for serving bitmap-adjusted images to a plurality of web clients, classified in class 358, subclass 426.16.
 - IV. Claims 24-25, drawn to a server which delivers an applet to a given web client for execution on the web client by a user, classified in class 358, subclass 442.
 - V. Claim 26, drawn to a computer program product electronically deliverable to a web client for execution in a browser virtual machine, classified in class 358, subclass 426.12.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, III, IV and V are related as combination and subcombinations. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination of invention I as claimed does not require the particulars of the subcombination in inventions II, III, IV, and V as claimed because the method of invention I is

Art Unit: 2622

for serving an image from a server and not serving a web page, bitmap-adjusted images, a web client, and the specified set is a set of one or more bitmap characteristics. The subcombination of invention II has separate utility such as serving a web page with a version of the image at a web server. The subcombination of invention III has separate utility such as generating a bitmap-adjusted version of the image at a given web client. The subcombination of invention IV has separate utility such as an applet deliverable to a given web client to generate given data identifying a number of bits per pixel. The subcombination of invention V has separate utility such as a user dialog including a master graphic control having at least first and second positions and a plurality of intermediate positions.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
